One **color system and one header grammar, mapped to every chart and table: the same tokens drive eyebrows, KPI arrows, table deltas, and this document.**

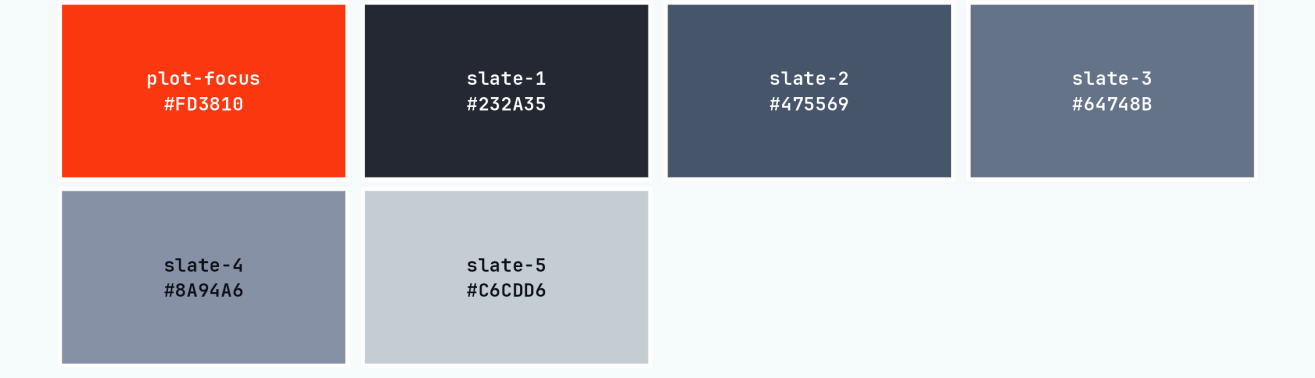

This showcase covers every static output in the chanwer package: palette previews, categorical / ordinal / sequential / diverging scales, the signed positive-negative system with its KPI scoreboard, all header treatments (eyebrow, subtitle, note, KPI, title-only, no header line, compact and spacious), all four brand surfaces plus transparent, framed variants, the chart forms (scatter, bar, line, area, distribution, error bars, heatmap, facets), and every chanwe_kbl() pattern — surfaces, densities, totals, highlights, vertical rules, signed deltas, title-only and header-less tables. The interactive counterparts (gt, highcharter, reactable) live in chanwer-showcase-html.qmd.

01 CHANWE v2 in charts.

chanwer 3.0.0 brings the charts and tables to the CHANWE v2 language (brand-v2 Q3, colour rule C1). Every value comes from the generated `chanwe_tokens` (chanwe-brandbook `tokens.json`): slate gridlines, horizontal only; no axis lines or ticks; Schibsted Grotesk titles; JetBrains Mono axis labels, legends and captions at the compact size; legend keys as pills; bars with 3px rounded ends (`geom_chanwe_col()` , `geom_chanwe_bar()`); tables as panes.

Orange is the one signal. The series that matters takes the focus orange and every other series sits on the slate ramp (`scale_fill_chanwe_focus()` , `scale_color_chanwe_focus()` , `chanwe_focus_colors()`). The categorical palette is for charts with no focus series.

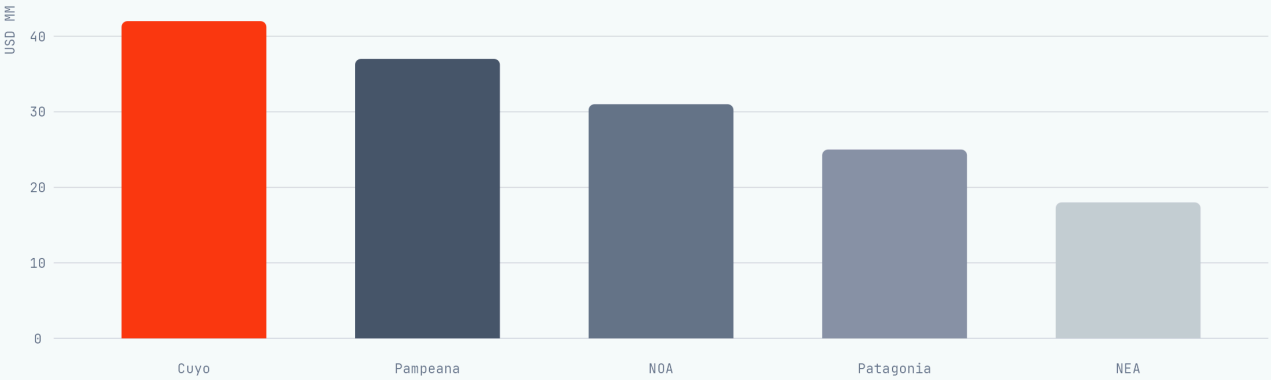

Chanwe palette · focus

V2 - FOCUS BAR

Sales by region

Cuyo is the focus; the other regions recede on the slate ramp

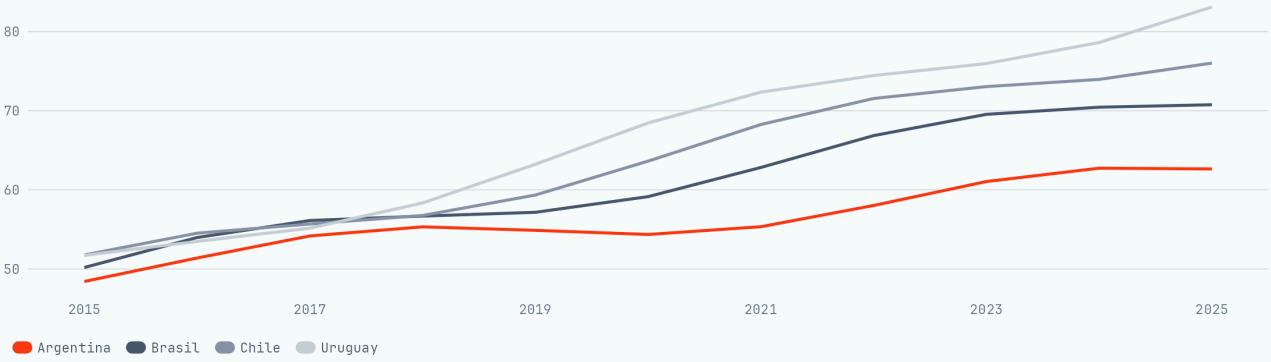

SOURCE: SIMULATED

V2 - FOCUS LINE

Activity index

Argentina against its peers, 2015 = 50

SOURCE: SIMULATED

02 The Color System.

Every color in `chanwer` is a named token. `chanwe_palette()` returns the full inventory; `chanwe_palette("<group>")` returns one group; `chanwe_preview_palette("<group>")` draws its swatch grid. The values are read from the generated `chanwe_tokens` (chanwe-brandbook `tokens.json`), never written by hand.

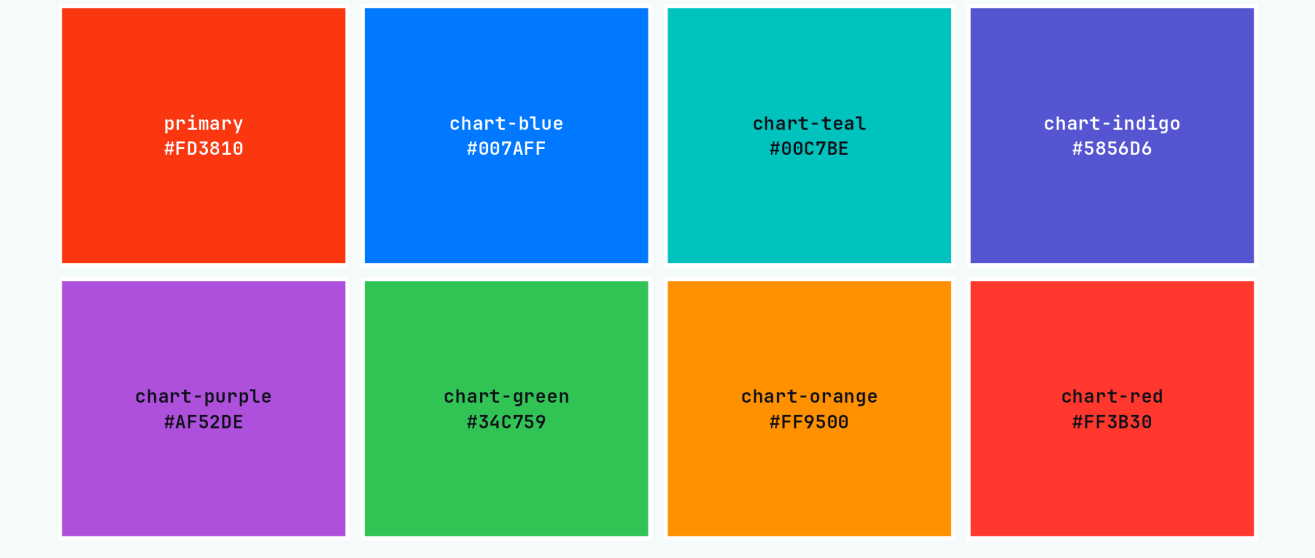

THE MANUAL ASSIGNS EACH FAMILY A JOB

Orange is the one accent, blue is structural, green is positive, red is alert, ink is the neutral anchor. The scales below are built on those roles — positive/negative is never an arbitrary red/green pair.

2.1 The categorical eight

The slot order is `plot.categorical` from `tokens.json` — primary orange, blue, teal, indigo, purple, green, orange, red — the eight series hues, shared with the callouts. Red sits last: it is nearly the primary, so the two only meet in an eight-series chart. Use it only when no series is the focus.

Chanwe palette · chart

2.2 The signed trio

The brand's `kpi-green` and `kpi-red` with the slate `fg-muted` as neutral; each passes WCAG 4.5:1 small-text contrast on every brand surface.

Chanwe palette · signed

2.3 Semantic roles and family ramps

Chanwe palette · semantic

Chanwe palette · ramp_teal

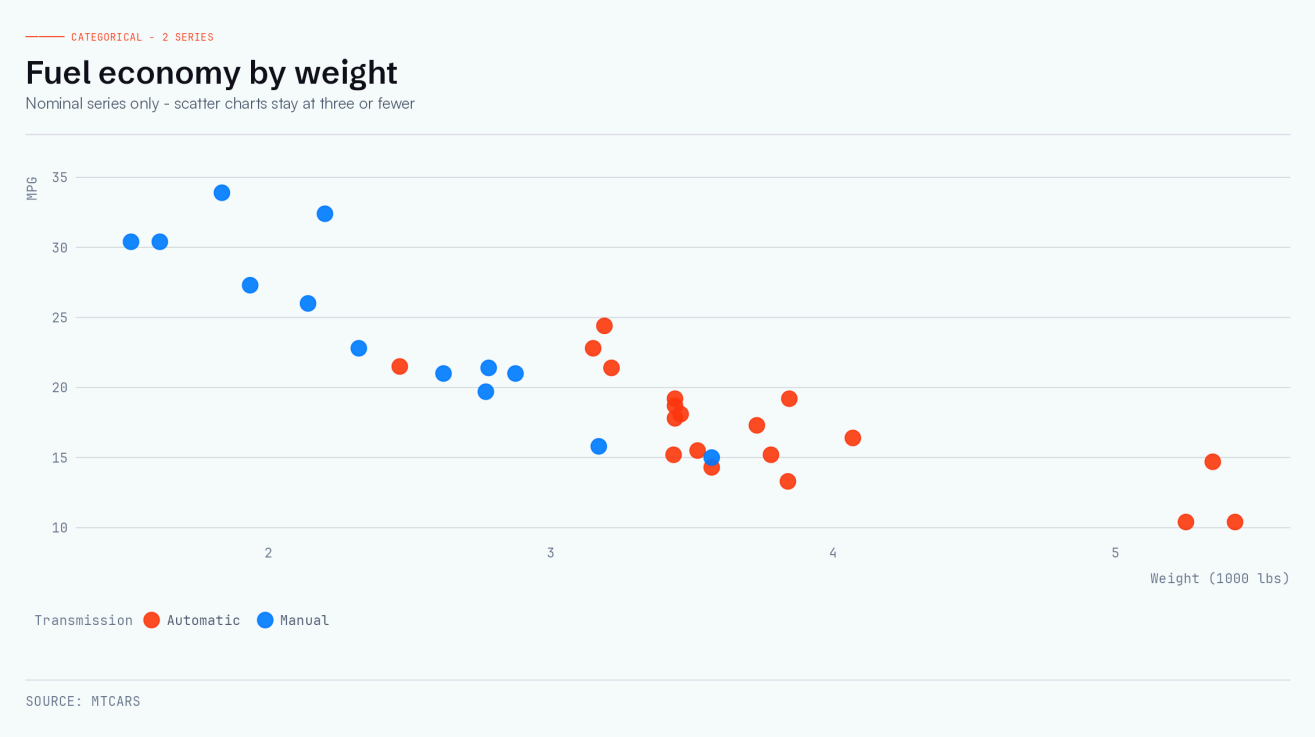

Chanwe palette · mb_orange

03 Scales.

3.1 Categorical

`scale_color_chanwe_d()` / `scale_fill_chanwe_d()` assign the chart palette in slot order, recycling past eight.

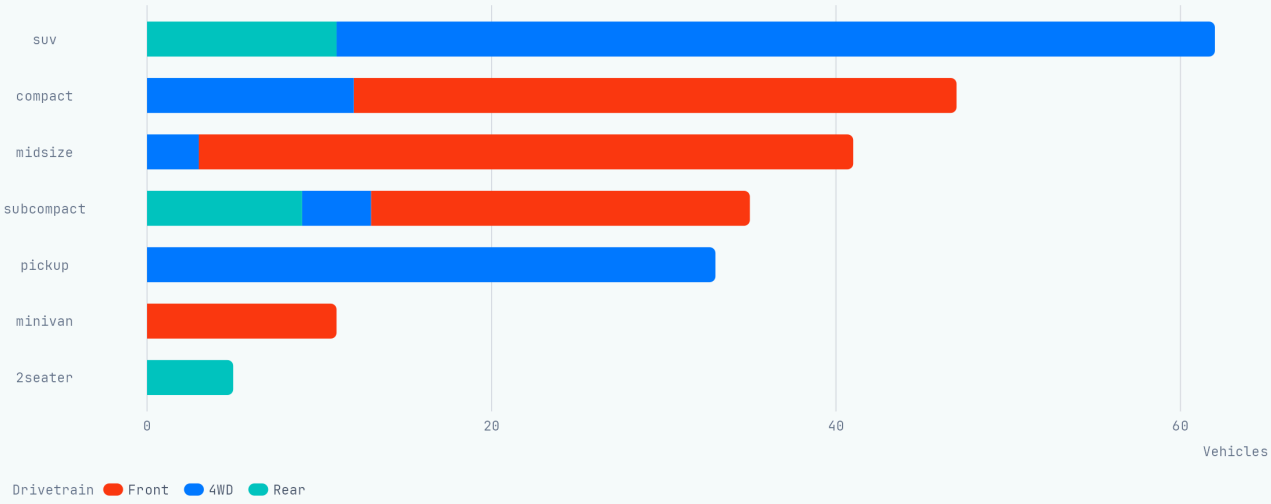

SCATTER, BUBBLE, AND MAPS: THREE SERIES MAXIMUM

In those forms any two marks can sit side by side, so the palette must pass the stricter all-pairs check — the first three slots do. Fold extra series into “Other” or facet. Bars, lines, and stacks may use up to six.

CATEGORICAL - STACKED BARS

Vehicles by class and drivetrain

Color encodes a second nominal variable - bars and stacks may use up to six series

SOURCE: GGPLOT2::MPG

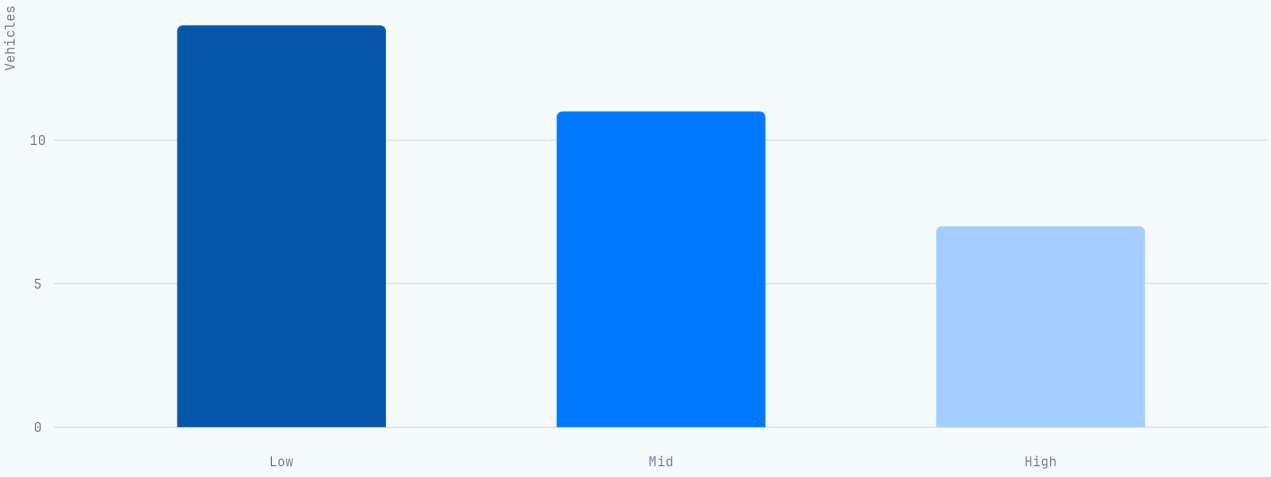

3.2 Ordinal: one-hue ramp

When category order carries meaning, use a ramp group so the reader sees the order in the color: `scale_fill_chanwe_d(palette = "ramp_blue", reverse = TRUE)`.

ORDINAL - ONE HUE

Fleet by horsepower band

Low to High reads light to dark in a single family

SOURCE: MTCARS

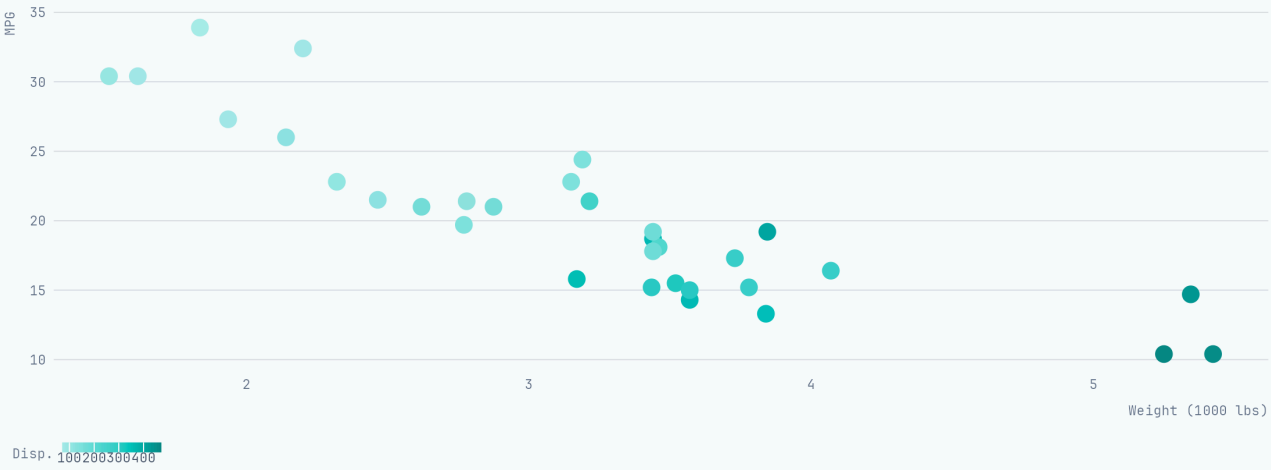

3.3 Sequential

`scale_color_chanwe_c()` / `scale_fill_chanwe_c()` encode magnitude with one-hue, light-to-dark gradients built from the series hues: `orange` (default), `blue`, `indigo`, `teal`, `green`, `amber`, `red`, `purple`, plus `mustard` and `ink`.

SEQUENTIAL - TEAL

Displacement gradient

One hue, light to dark, magnitude only

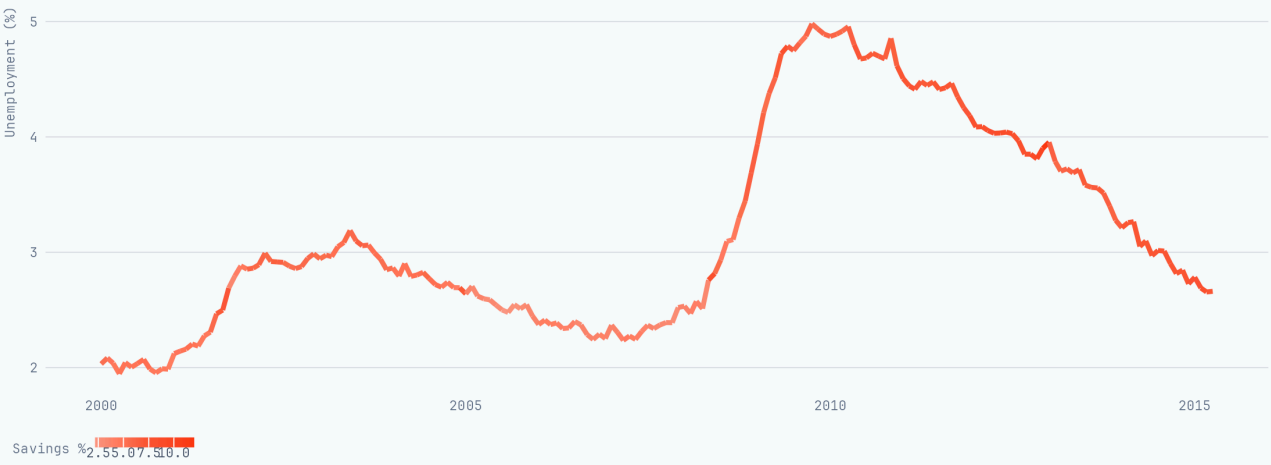

SOURCE: MTCARS

SEQUENTIAL - ORANGE (DEFAULT)

Unemployment, colored by savings rate

The default gradient anchors on the report primary

SOURCE: GGPLOT2::ECONOMICS

3.4 Diverging

`scale_fill_chanwe_div()` encodes polarity — red through a neutral midpoint to green, signed tokens at the poles. Give it symmetric limits so zero lands on the midpoint.

DIVERGING - HEATMAP

Weekly delta vs plan

Symmetric limits pin zero to the neutral midpoint

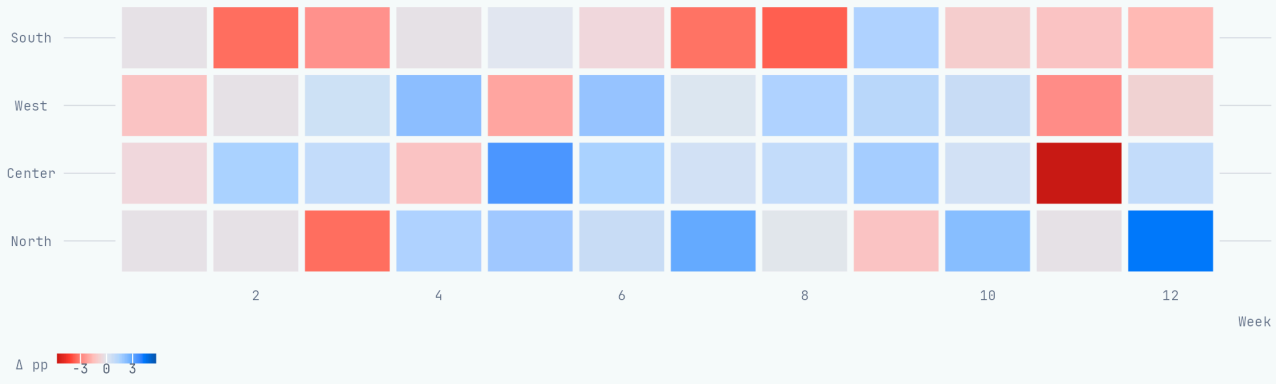

SOURCE: SIMULATED

DIVERGING - CVD = TRUE

Weekly delta vs plan, CVD-safe

Positive arm switches to structural blue; polarity survives deuteranopia

SOURCE: SIMULATED

DIVERGING - BARS

Highway MPG vs fleet average

Above average in green, below in red

SOURCE: GGPLOT2::MPG

04 The Signed System.

One pair everywhere: `chanwe_palette("signed")` drives the KPI arrows, table deltas and the diverging poles. `direction` states the movement (▲/▼); `valence` states whether that movement is good news and drives the color.

// POSITIVE

#14770

hue-true brand green

// NEGATIVE

#CC191

hue-true vermillion

// NEUTRAL

#47556

pizarra fg-muted

// CONTRAST

Unemployment rate

Share of population, monthly

SOURCE: GGPLOT2::ECONOMICS

4.2 Signed deltas in tables

`chanwe_col_signed()` colors by the column's *raw* values; `flip` marks the smaller-is-better rows so color reads as valence, not sign.

SIGNED - TABLES

QUARTERLY PERFORMANCE

Signed deltas via chanwe_col_signed() - flip marks Opex and Churn so color reads as valence

METRIC	USD K	QOQ	YOY
Revenue	1,240.5	+12.4%	+28.1%

05 Header Treatments.

The header grammar: mono-caps eyebrow with an orange rule, Schibsted Grotesk title at 1.85x base, Satoshi subtitle, optional note line or KPI scoreboard, and an mono source caption (`caption_style = "stamp"` brings back the orange stamp).
